## Abstract

---

Western Europe is at the forefront of 5G deployment and, as such, is also pushing ahead with edge computing. While the initial mobile 5G launches are likely to be in the U.S., European operators are expected to follow quickly in 2019. This will also involve the move to 5G New Core in late 2019 or 2020. Part of the 5G implementation process includes moving to software defined networking (SDN), network function virtualization (NFV). Edge computing (EC) and Central Office Re-architected as a Data Center (CORD) are two sub-sets of the overall shift away from the traditional network architecture to one that looks more like a data center.

Moreover, both CORD and EC are aspects of the same concept – network equipment and software moving from proprietary platforms to (open source) software running on COTS hardware.

This market study models and forecasts what Western European mobile operators will spend putting in EC into their networks. Implementation of the 5G new core is discussed because it is a related technology platform; EC and 5G new core will likely be deployed alongside each other in the mobile networks. *iGR* has therefore included its forecast for Western European mobile operator spending on building the 5G new core.

Key questions addressed in this market study include:

- What is EC? What are some of the other edge computing concepts?
- How does EC work?
- How does EC relate to other edge computing initiatives, such as OpenFog, CORD Project, Open Edge Computing (OEC), Open Compute, and EdgeX Foundry?
- What can be done with EC?
- How is edge computing implemented with public cloud?
- What are some of the perceived benefits and issues related to EC?
- What are the key drivers for implementing EC?
- What is CORD and M-CORD?
- How do CORD and M-CORD work?
- What can be done with CORD and M-CORD?

Quoting information from an *iGillottResearch* publication: external — any *iGillottResearch* information that is to be used in press releases, sales presentations, marketing materials, advertising, or promotional materials requires prior written approval from *iGillottResearch*. *iGillottResearch* reserves the right to deny approval of external usage for any reason. Internal quoting individual sentences and paragraphs for use in your company's internal communications activities does not require permission from *iGillottResearch*. The use of large portions or the reproduction of any *iGillottResearch* document in its entirety does require prior written approval and may have some financial implications.

FOR INFORMATION PLEASE CONTACT IAIN GILLOTT (512) 263-5682.

- What are some of the perceived benefits and issues related to CORD and M-CORD?
- How much mobile operator spending is likely to occur on EC-based solutions?

Who should read this report?

- Mobile operators
- Infrastructure OEMs
- Computing infrastructure OEMs
- Public cloud vendors and OEMs
- Data center OEMs and operators
- Small cell product and solution vendors
- Backhaul service providers and equipment OEMs
- Financial analysts and investors.
