## Abstract

---

Europe is starting work on the migration to 5G, with many trials underway and the first commercial networks expected soon. However, 5G network deployment will not be complete in a year or two, but will instead take many years to fully deploy; Europe is a large region with many countries and mobile operators. As a result, LTE will continue to carry the majority of European mobile data traffic for the next few years.

This market study presents a forecast for the cost of building, deploying and operating LTE and 5G networks in Europe beginning in 2018 and continuing through 2028. Included is a mobile network infrastructure build forecast, which is further detailed by mobile network component (RAN, front/backhaul, and core) and generation (LTE and 5G). The study also includes a forecast of network operating costs. In addition to the forecasts, the market study provides detailed information on evolving mobile network architectures, 5G networks, and how the European mobile industry is deploying 5G.

Key questions addressed in this market study include:

- How will the amount of data traffic carried on LTE and 5G networks grow in Europe in the next ten years?
- How big is the LTE and 5G infrastructure opportunity in Europe in the next ten years?
- How fast will 5G network spending grow in the next ten years in Europe?
- What is the share of infrastructure spending for the network components of RAN, fronthaul/backhaul, and core in the next ten years?
- What is the share of infrastructure spending for LTE and 5G in the next ten years?
- What are the expected mobile network operating costs in the next ten years?
- What are the various 3GPP standards leading up to 5G and what are they likely to contain?
- What is 5G? How is it defined and/or viewed right now? What are the key capabilities for 5G networks?
- What are some of the goals and use cases for 5G?
- How will European mobile operators migrate from their 4G LTE networks of today to tomorrow's 5G networks?

Quoting information from an *iGillottResearch* publication: external — any *iGillottResearch* information that is to be used in press releases, sales presentations, marketing materials, advertising, or promotional materials requires prior written approval from *iGillottResearch*. *iGillottResearch* reserves the right to deny approval of external usage for any reason. Internal-quoting individual sentences and paragraphs for use in your company's internal communications activities does not require permission from *iGillottResearch*. The use of large portions or the reproduction of any *iGillottResearch* document in its entirety does require prior written approval and may have some financial implications.

FOR INFORMATION PLEASE CONTACT IAIN GILLOTT (512) 263-5682.

- What have the major European mobile operators done to trial and prepare for 5G? When did they launch/will they launch their initial 5G networks?
- What is Non-standalone New Radio (NSA-NR)? How do MIMO and beam steering impact 5G networks?

Who should read this report?

- Mobile operators
- Infrastructure OEMs
- Small cell product and solution vendors
- Edge computing solution providers
- Backhaul service providers and equipment OEMs
- Financial analysts and investors.
